

ABSTRACT

[0044] A method for displaying facial features includes generating an image with facial features on a nonplanar surface and positioning the image on the nonplanar surface to indicate a direction of gaze and enhance nonverbal communication associated with the facial features. The apparatus for displaying facial features includes a nonplanar surface, an image generation device that creates an image with facial features on the nonplanar surface and a positioning system that positions the image on the nonplanar surface to indicate a direction of gaze and enhance nonverbal communication associated with the facial features.
